# WHAT'S SEMANTICS GOT TO DO WITH IT?

- The Journey from Data Management to Knowledge Management

9:30 AM - 12:00 AM

**30 JULY**

## ABOUT THE WORKSHOP

The HIM profession has largely abandoned titles like Medical Records Librarian, too often reminding new HIM graduates of the days of Edna K. Huffman, one of the field's founders. New HIM job titles are sexier, have more respect and often pay better. The focus of these new types of work leans on data management, privacy/security or revenue cycle improvements. This presentation looks back to AHIMA's original mission, i.e. records management and demonstrates how our colleagues in library science have pioneered new career pathways through the exploration of semantics to illuminate how we reach our own healthcare-related goals of findability, interoperability and knowledge discovery.
